NORMA M20F Sets the Standard for Environmentally Clean Racing

IRVINE, Calif. - Automotive Technology Group (ATG) is pleased to announce the selection and presentation of the NORMA M20F race car in the May issue of Car and Driver. The car is featured in a segment called “Bio-Racing – Little Green Racing Machines.”

ATG took two normally aspirated, gas powered NORMA M20F 2.0 liter sports car and converted them to run on E85, resulting in increased horsepower output of 10% while significantly reducing emissions. Both cars ran flawlessly for the full duration of the 25 hour of Thunderhill endurance in Northern California. One of the cars finished 2nd place overall capping off an exciting race where the two E85 powered cars repeatedly reset fast lap of the race.

The cars were also featured in the February 2008 issue of Ethanol Producers Magazine in an article that discussed the Thunderhill race and the merits of Bio-Ethanol in race cars. The article titled “Quick off the Straw” has drawn attention from all automotive sectors.

About ATG

Based in Irvine, CA, Automotive Technology Group (ATG) is a privately-held California corporation specializing in automotive engineering, low volume manufacturing and motorsport program management. Our team has a lifetime worth of experience managing top level motorsport programs. We have the capability to design, develop and manufacture racecars and concept vehicles, as well as the production capacity to build more than 100 special projects per year. ATG is the largest provider of concept car electrical systems in the United States.
